Paul Akintunde

WEB DEVELOPER

PROFILE

As a web developer, I've worked on projects which involved rendering UX designs into reusable code with the use of frontend and backend tools such as Reactjs and Django(python). Through this experience, I had the opportunity to improve, write maintanable and easy to understand codes. QuickMath, a project i worked on " a question based web app" built with Reacjs and Django. The web app was created for a joint examination in mathematics for senior school students which allows students to select questions based on their preference and the app displays their performance in form of a chart.
i learnt alot of responsive web design, functional and classed based view with Django and Reactjs respectively.
